## 400Gb/s QSFP-DD FR4 Transceiver QSFP-DD-400G-FR4

## C $\in \mathbb{F C}$ RoHS

## Features

- Compliant with 400G-FR4 optical specifications
- Compliant with QSFP-DD MSA
- Compliant with CMIS4.0 Management interface specifications
- $8 \times 53.125 \mathrm{~Gb} / \mathrm{s}$ electrical interface (400GAUI-8)
- Up to 2 km transmission on single mode fiber (SMF) with FEC
- Single +3.3 V power supply
- Case temperature range: $0 \sim+70^{\circ} \mathrm{C}$
- Maximum power consumption 10W
- Duplex LC connector
- RoHS complaint

## Applications

- 400G BASE-FR4 Ethernet
- Enterprise Networking
- Infiniband Interconnect
- Data center network

## Description

This product is designed for 2 km optical communication applications. The module converts 8 channels of 50Gb/s (PAM4) electrical input data to 4 channels of CWDM optical signals, and multiplexes them into a single channel for $400 \mathrm{~Gb} / \mathrm{s}$ optical transmission. Reversely, on the receiver side, the module optically demultiplexes a $400 \mathrm{~Gb} / \mathrm{s}$ optical input into 4 channels of CWDM optical signals and converts them to 8 channels of 50Gb/s (PAM4) electrical output data.

The module incorporates 4 independent channels on CWDM4 1271/1291/1311/1331nm center wavelength, operating at 100G per channel. The transmitter path incorporates 4 independent EML drivers and EML lasers together with an optical multiplexer. On the receiver path, an optical demultiplexer is coupled to a 4-channel photodiode array.

It is a cost-effective and lower power consumption solution for 400GBASE data center. It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference. The module offers very high functionality and feature integration, accessible via a two-wire serial interface.

## Diagnostic Monitoring Interface

Digital diagnostics monitoring function is available on all QSFP DD products. A 2-wire serial interface provides user to contact with module.
